Hobby Q&A —
 Can the lunar crescent be seen in a telescope at new Moon when the Moon is at its greatest inclination? 3:116
 Do Saturn's moons cast observable shadows on that planet? 3:116
 Does stopping down your telescope to a smaller aperture produce sharper images? 1:118
 How bright is the combined magnitude of all visible stars? 2:110
 How can giant stars in a binary system have an orbital period of a few days? 5:112
 How do I convert equinox 1950.0 celestial coordinates to the current standard 2000.0? 5:112
 How is the time of new Moon defined? 3:116
 How would Earth look to a Martian observer? 3:116
 If I lived on Saturn, would the rings be visible? 2:110
 Is it possible to see the crescent of Venus naked-eye? 6:116
 Is there another planet whose moon(s) would fit over the Sun producing a perfect fit for a total eclipse? 5:112
 What happened to Saturn's ring "spokes" that were revealed by the 1979 Voyager spacecraft? 4:112
 What percentage of our galaxy's stars move in retrograde orbits? 6:116
 When was the last time the two stars of Alpha Centauri were closest? 4:112
 Why aren't the Magellanic Clouds included on deep-sky-object lists? 6:116
 Why do astrophotographers stack exposures? 1:118
 Why is Uranus considered to have a retrograde spin? 1:118
 Why not list the name of the question writers in the Hobby Q&A column? 2:110
 Why wouldn't a GPS receiver display zero longitude at Greenwich Observatory? 2:110
 Will a 12- or 14-inch scope dramatically improve my view of nebulae and galaxies over my 6-inch telescope? 4:112
