Grab Your **Binoculars** and Go!

Exploring the wonders of the cosmos doesn't require expensive and complicated equipment. The **moons of Jupiter, breathtaking nebulae, and distant galaxies** are all visible through binoculars!

Binocular Highlights: 99 Celestial Sights for Binocular Users
 By Gary Seronik

Binocular Highlights is a tour of 99 different celestial sights — from softly glowing clouds of gas and dust to unusual stars, clumps of stars, and vast star cities (galaxies) — all visible in binoculars. Each object is plotted on a detailed, easy-to-use star map, and most of these sights can be found even in a light-polluted sky. Also included are four seasonal all-sky charts that help locate each highlight. *104 pages, 6 by 9 inches, spiralbound, softcover.*
